

CONTOUR MAP

East Hampton, CT

(North)

EXPLANATION

Contour lines are used to denote elevation above sea level. The contour interval is 20 feet. Contour lines are drawn from a statewide collection of ground elevation data for the year 2000. This information is only intended for general reference and is not intended for exact determination of elevation where a survey is normally required, or for detailed engineering work. Contour lines that cross streams flowing through the map area are drawn in a V-shape pointing upstream with the apex of the V pointing upstream.

DATA SOURCES

USGS MAP DATA - All data is based on 1:250,000 scale topographic maps and their symbols, contours, and other features. The data is derived from the USGS and added to the data with other available maps.

MAPS AND DIGITAL DATA - The CT 600 website for this map and a variety of other CT 600 data sets. Based on Terrestrial, unprojected Cartesian, UTM, datum: NAD 83, ellipsoid: Spheroid Digital Elevation Model (DEM) surface based on 1:250,000 scale topographic data.

Map prepared by CT DEP, May 2011.
This map is based on data from the year 2000.
