

Town of East Hampton

Inland Wetlands & Watercourses Agency

Application at 40 Old Middletown Rd. East Hampton

By David W. Erlandson, P.E.

I, David W. Erlandson, have been contracted to provide services at 40 Old Middletown Road East Hampton to design, receive necessary permits and install a complete new septic system to replace the existing 40 year old plus system that is currently failing. Approval of this installation will be required by Chatham Health District as well. We are proposing the installation of a proprietary system using S-box leaching fields in an effort to reduce the footprint to an absolute minimum. A new septic tank and Geomatrix High Air pump chamber will be required as well. Disturbance of approximately 0.2 acres of grass yard will be disturbed during this installation. As shown on the detailed plan provided, the western property boundary of this parcel is the centerline of Great Hill Pond Brook. No disturbance is proposed within the brook. Please refer to the attached plan for all design parameters.
