Jeremy

At 15 Lake Drive, Noslen Inc owns and operates Nelsons'Court. At this location we currently have several sets of boat slips. Our proposed plan is to replace one set of floating wooden docks with newer plastic docks. This will allow us to keep serving our customers with safer, cleaner docks including a slip or two that will be ADA compliant. The project itself is really just two steps. We plan to use a back hoe to take a few very small scoops of dirt out to be able to set forms for a concrete pour of approximately 16 square feet. The concrete will have attachment points for the new ramp for the new dock. We plan to dig, set the forms and backfill all within a day or two. We will be performing all the work ourselves and will provide several hay bales to protect the downhill side of the hole. The dirt will be put into a truck and removed and then brought back as needed to back fill, no loose dirt will be stored on the site. In

.addition we need to smooth a small area to allow for a safe access path and plan to finish this with stone dust approximately 4 feet wide, total of approximately 60 sq feet. This path must be smooth enough for ADA access.

We request permission to dig small hole, pour concrete and back fill. This should have little or no impact on the lake.

Sincerely

Glenn Gustine
