MEDIA RELEASE

FOR IMMEDIATE RELEASE

East Hampton COVID-19 Update as of April 29, 2021

ORANGE ALERT LEVEL AND VACCINATION

East Hampton, CT, April 29, 2021 – East Hampton has again returned to the “Orange Alert” level under the State’s COVID Response Framework as the Town’s case rate remained at a lower level. According to the most recent information from the Connecticut Department of Public Health (DPH), East Hampton had 23 new confirmed cases of COVID-19 in the last two weeks, which brings the Town’s two-week average daily positivity rate to 12.8 per 100,000 population. The two-week rate equates to about 1.6 new cases each day but with only 7 cases last week, our rate is at one case per day. Residents are urged to maintain safety protocols and be diligent as they protect themselves and others.

In addition to wearing facial coverings, a significant part of the effort to be safer is the vaccine. As of April 28, DPH information shows that about 52%, or over 6,700 of the Town’s residents have received at least the first dose of the vaccines. Detailed information shows that virtually all Town residents over 65 years old are vaccinated and almost 63% of residents between 45 and 64 years old are vaccinated. Almost 45% of eligible residents under age 45 have been vaccinated. All residents 16 years old and older are eligible for vaccination and are encouraged to be vaccinated. The Chatham Health District continues to implement vaccination clinics to assist residents in becoming vaccinated.

Even after a resident has been vaccinated, they are reminded to remain vigilant and to wear a face covering when gathering socially and in public places and, in particular, when visiting restaurants, businesses or governmental offices and attending meetings. As the community continues to work through vaccinations, residents are also reminded to limit their social interactions with those outside their own households, to stay home from work or school when they are sick, to quarantine for 10-14 days when they have been told that they were in close contact with a person who had COVID-19 (unless they are fully vaccinated), to get tested for COVID-19 and notify their employer and close contacts if they become aware that they have COVID-19. Masks should completely cover the nose and mouth and fit snugly against the sides of face without gaps. Masks should be made of multiple layers (2 is OK, 3 is better) of tightly woven fabric.
